(54) FILE COPYING SYSTEM

(57)Abstract:

PURPOSE: To shorten the time of transfer by transferring only file data of whose date is more fresh than that of another file device, to another films.

CONSTITUTION: Date data (D1, D2W) of the day are added to individual file data from a processor 2 in a controller 3, and these individual file data are stored in a file device 1 for update. A file device 6 for backup is provided with a date storage part (d), and the date is updated after copy. A processing part 4 takes out individual files F1, F2WF_n into a memory 5 and compares their date D1, D2W with a date D0 of the date storage part (d) and transfers only individual files, whose date is more fresh than the date D0, to the file device 6. Thus, the

time of transfer is shortened, and the most fresh data is filed.
